

Hello Ladies!

We are so excited to see you at **WIC Hacks** in a less than two weeks! I'm Kayla, the Outreach Chair for WIC Hacks and I've been making a **Newbie Track** for those of you with **no coding experience**. This track starts from the ground up with the programming language [Processing](#). **We'll begin with getting used to the coding environment, move onto user interaction, get familiar with variables and conditionals, and end with getting accustomed to loops and functions.**

Is this track for you?

The Newbie Track is mainly for high schoolers and there are limited slots left, but it's built for anyone who has no programming experience. **If you are a non-programming major and you have never coded before this track might be right for you.** If you are interested in participating in the Newbie Track, please indicate your interest on [this form](#).
